

Virtua Heart Failure Center

Improving Patients' Lives,
One Beat at a Time

What Is Heart Failure?

Heart failure is a common condition that slowly progresses as the heart weakens and needs to work harder to keep blood flowing through the body. It can develop after a heart attack, long-term high blood pressure, or a heart valve problem.

If you have heart failure, you can enjoy better health and stay out of the hospital by taking care of yourself and working with a specially trained medical team.

Our Program

The Virtua Heart Failure Program is the most established and experienced of its kind in South Jersey. Our proven education and treatment program—driven by guidelines from the American Heart Association, American College of Cardiology, and Heart Failure Society of America and using the latest approaches to care—is designed to help you manage your condition.

We work closely with your cardiologist and primary care provider, seeing you as often as you need. You will learn to manage your heart failure symptoms through:

- Medication
- Changes in diet
- Monitoring and tracking your weight and any fluid retention on a daily basis
- Exercise
