56 **Confirmed Cases:** 26 Cases Burlington Co 22 Cases Camden Co 8 Cases Gloucester Co

As of 3/29/2020 at 8:30 PM

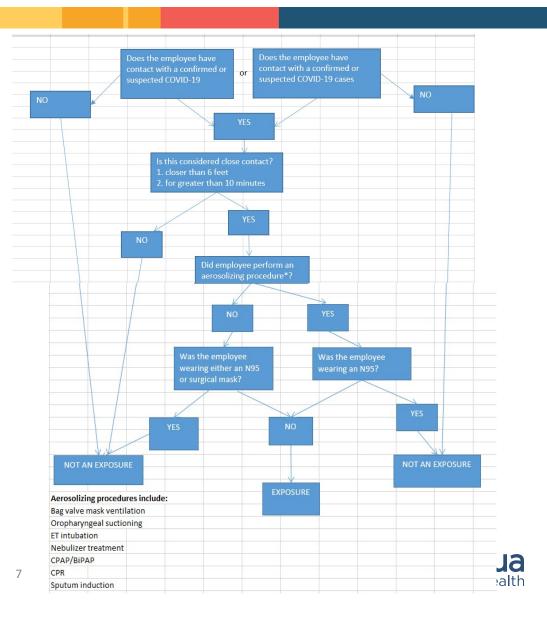

573% increase in regional cases

Identifying an Potential Exposure amongst your Employees

- Key determinant of being a close contact is
 - Closer than 6 feet for greater than 10 minutes
- If + close contact, determine if employee performed an aerosolizing procedure
 - Nasopharyngeal or Oropharyngeal swabbing is
 NOT an aerosolizing procedure

www.virtua.org/evisits

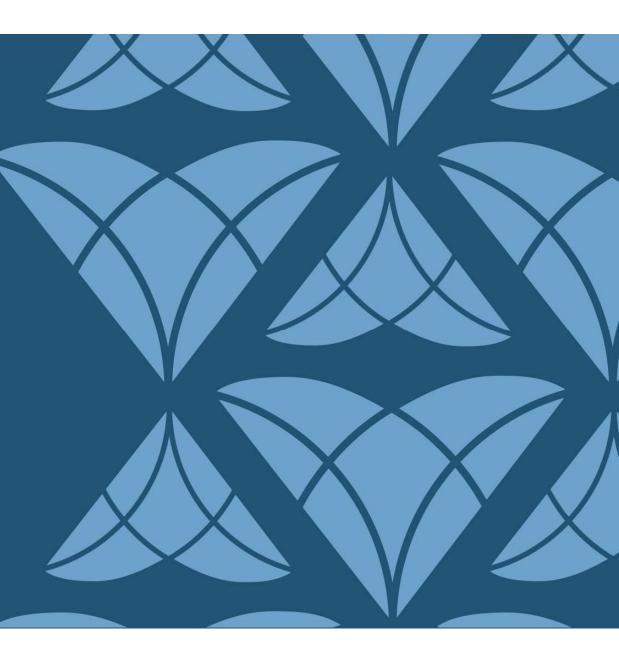

- Video visit with physician or advanced practice clinician
- Encounter recording into Epic and note routed to PCP
- eVisit providers follow the latest Virtua protocols as posted on Digital411
 - eVisit providers can order COVID testing for appropriate patients at Virtua Drive-Thru Center

Policy Changes

Virtua Surgical Leadership has decided that we will NOT perform laparoscopic or robotic surgery as of Tuesday, March 31

- Recommendations may change when immediate widespread rapid turnaround testing becomes 1. more available.
- 2. All surgical patients should be screened preop using a screening tool. We will implement such screening in our preop areas.
- For COVID-19 positive, suspected, or at risk untested patients, laparoscopic surgery should not 3. be performed.
- For known positive COVID-19 tested patients: 4.
 - Urgent surgery should be delayed, if possible, until the infection clears, and alternate strategies should be employed when possible (e.g. antibiotics, percutaneous drainage). If impossible to delay, these surgeries should be performed via laparotomy.
 - Emergency surgeries not amenable to non-surgical management should be performed via laparotomy rather than minimally invasive surgery requiring pneumoperitoneum, using full PPE for all staff in the room.
- For patients with positive screens but no testing: 5.
 - Emergency and urgent surgeries should be done via laparotomy. If Infection Control recommends enhanced droplet precautions, full PPE should be used for all personnel in the room, if available.
- For known COVID-19 negative (tested) patients: 6.
 - This is a moot point for now, since we do not have any way of knowing if a patient is COVID-19 negative on the day of surgery. Laparoscopy will be an option when we can identify who is in this group.
- For untested patients with negative preop screening for all variables 7.
 - · Laparoscopy will be an option when we have adequate supplies of N95 masks and full PPE for all OR personnel It is not an option at the present tome

celebrate

National Doctor's Day

There couldn't be a more appropriate time to recognize the people who, at this very moment, are putting themselves in harm's way for the greater good of our communities. The people who put their lives on hold

when they get a call in the middle of the night, the people who offer words of encouragement or comfort when we are at our most vulnerable. And the people, without whom, our world would be a much darker place.

#HereForGood
