

TOP INNOVATORS - 2023

Healthcare is a business ripe for innovation. That's clear from the hundreds of millions of dollars invested every year in partnerships, care models and technology aimed at boosting patient access to services and saving money. While many fail to make change, the individuals in Modern Healthcare's Top Innovators class of 2023 have successfully employed creative strategies to achieve tangible results at their companies and across the wider industry. Congratulations to this year's honorees!

Dennis Pullin

President and CEO

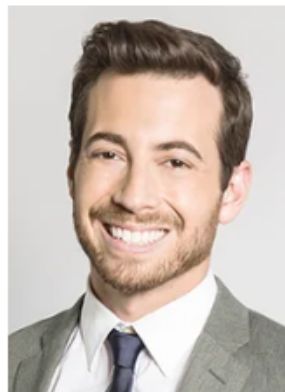

Virtua Health

Pullin is the driving force behind several innovations emerging from Virtua Health. For instance, Virtua recently established a proton therapy center in partnership with another health system to bring advanced treatment to southern New Jersey. Pullin has also pushed the Marlton, New Jersey-based nonprofit health system to scale its mobile health initiatives.

The programs, which include a mobile farmers' market, pediatric services and cancer screening programs, are seeking to deliver services where patients live, study and work. The community-based projects have produced measurable impacts, with the Pediatric Mobile Unit serving a record 4,800 children in 2022 and generating an estimated return on investment of \$14.3 million.
